

Active Directory Management

Installation Upgrade Guide

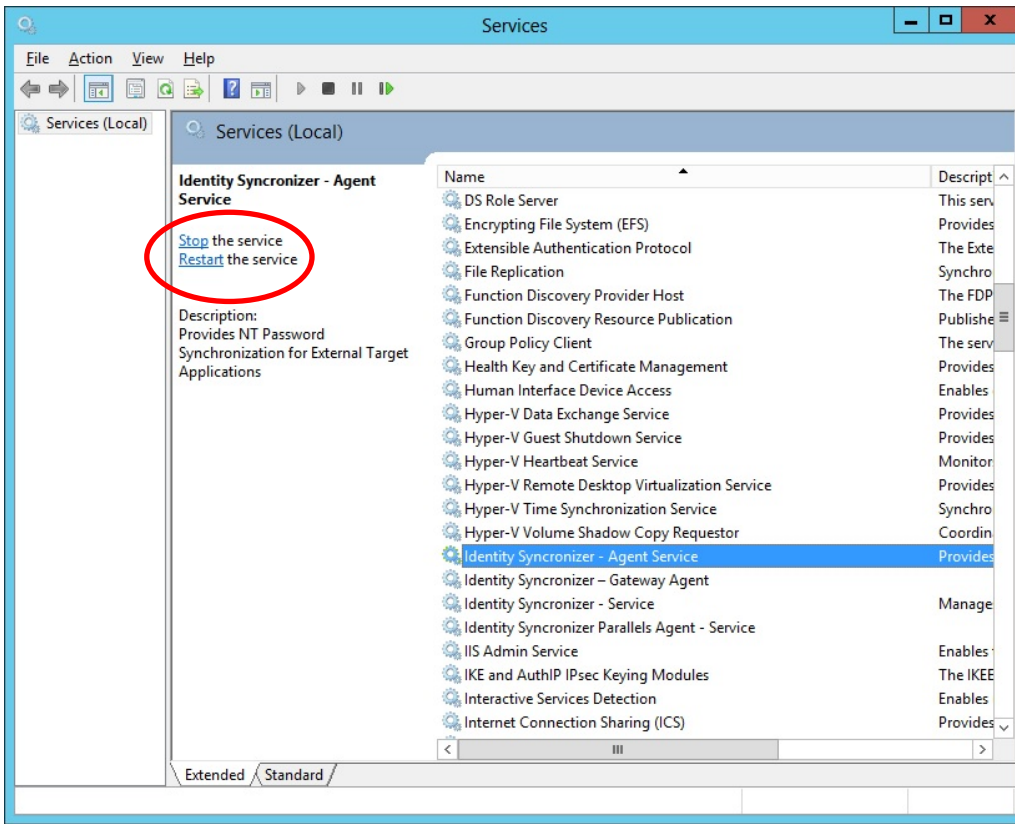

Document Revision Date: June 12, 2014

When a new version of AD Mgmt is released, Aptix will push the .exe file to existing customers' AD Mgmt administrators, who will then perform the upgrade installation for their service.

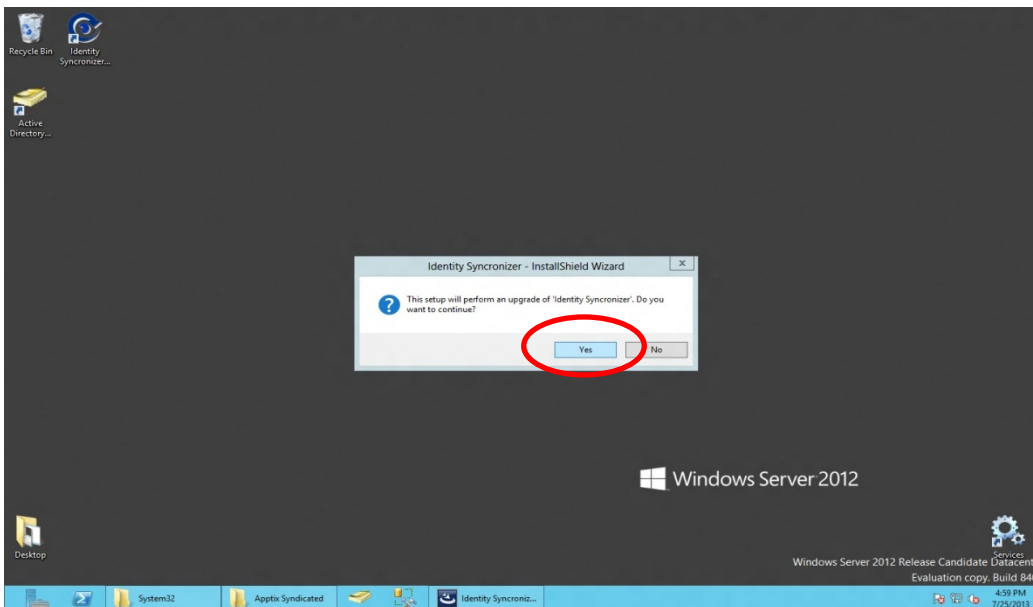

1. **Stop** the **Identity Synchronizer – Service** either in the Windows service manager or in the Identity Synchronizer Management Studio:

2. **Stop** the **Identity Synchronizer – Agent Service** if the machine to be upgraded is a domain controller:

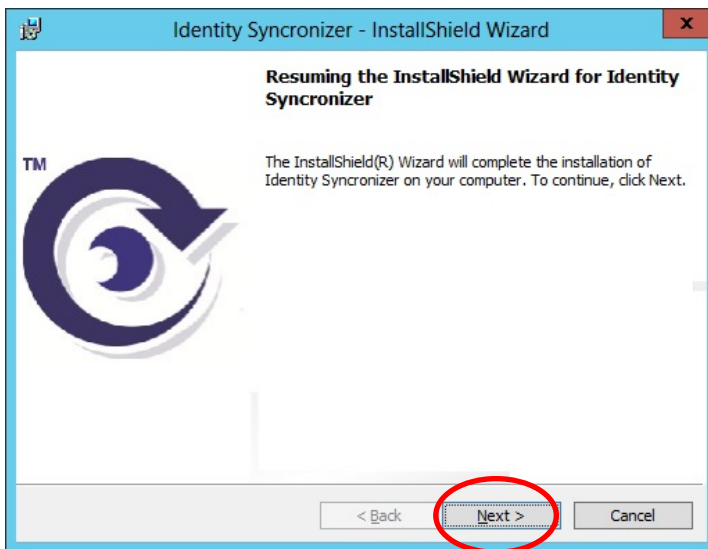

3. Double-click the updated ID Sync installer.
4. Click **[Yes]** on the dialog asking if you would like to upgrade:

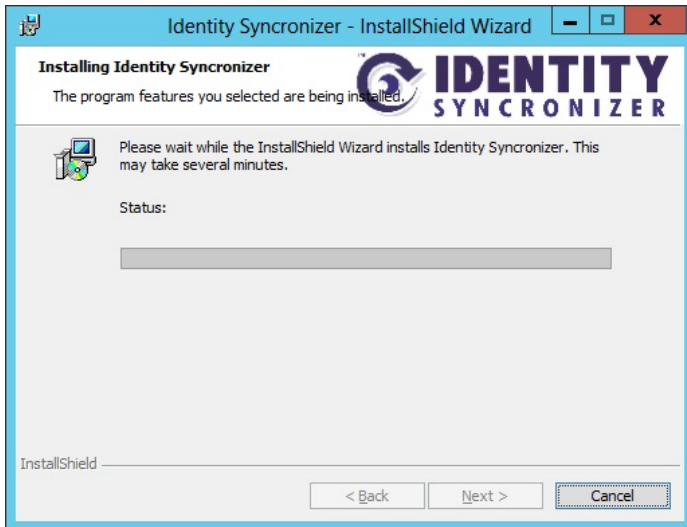

The installation wizard begins the installation process:

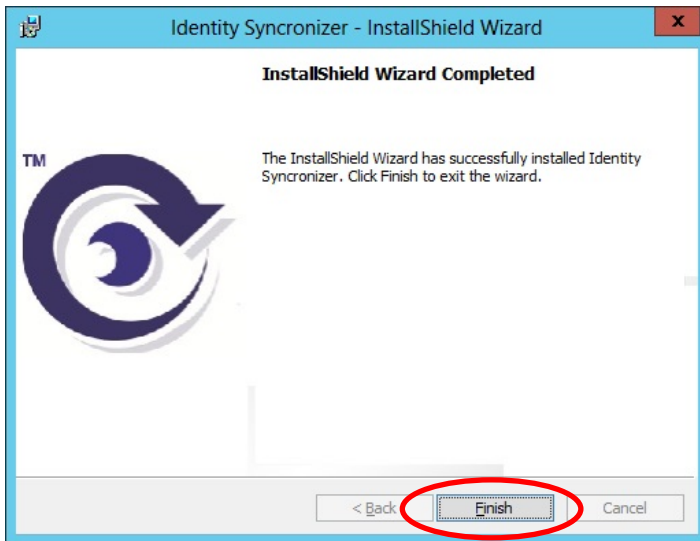

5. Click **[Next]** on the following wizard dialog:

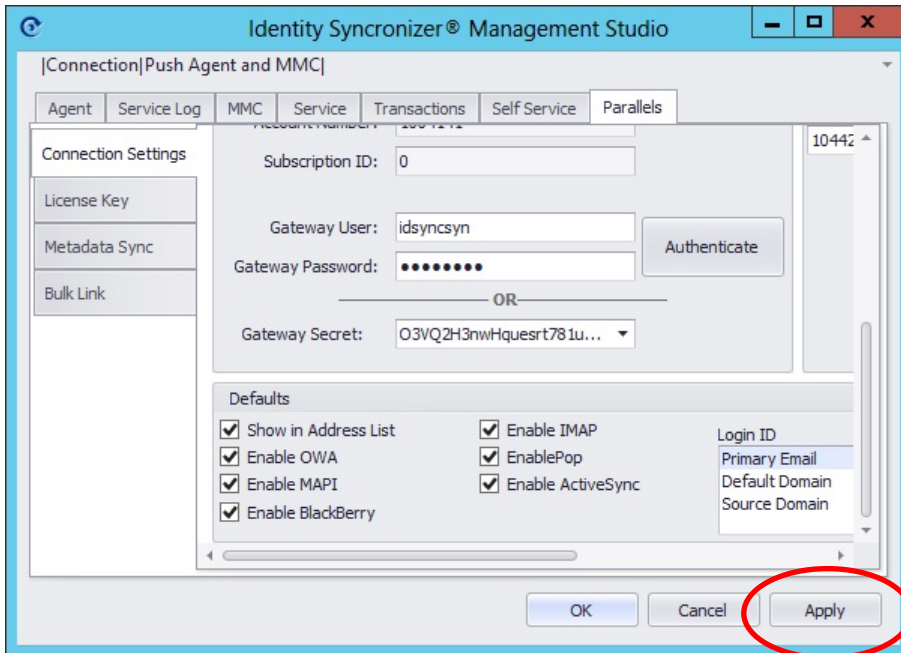

The wizard continues installing:

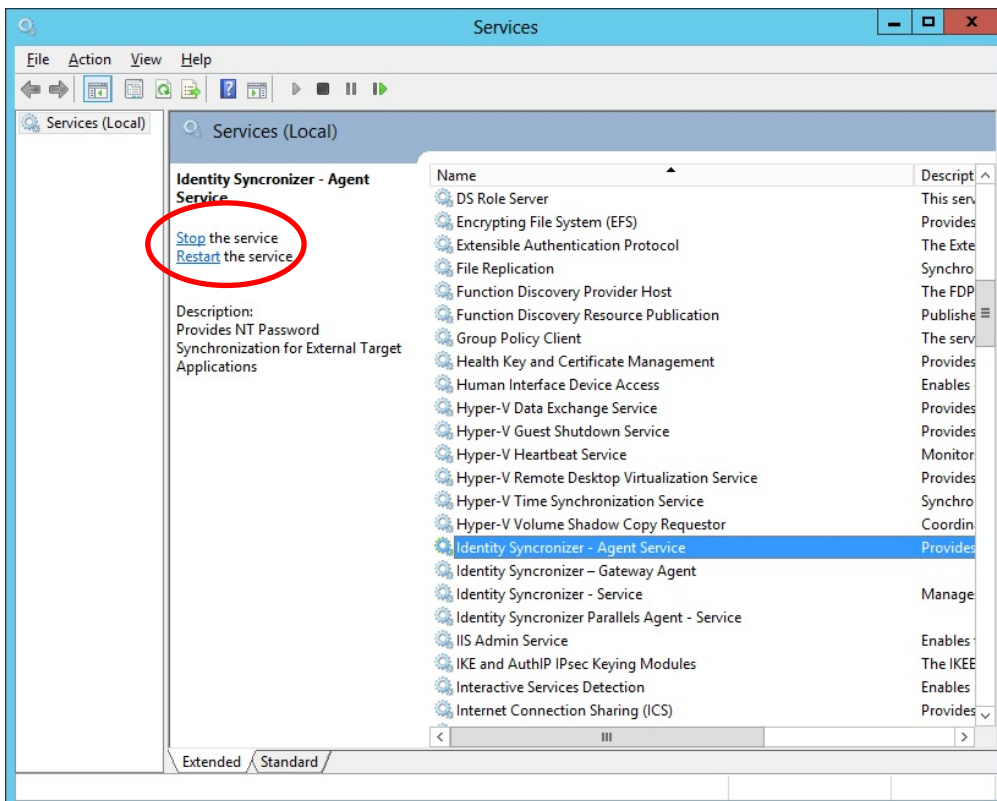

6. Click **[Finish]** on the final wizard dialog:

- Once the installation is complete, open the Identity Synchronizer Management Studio and click the **[Apply]** button:

- Restart** the **Identity Synchronizer – Service** either in the Windows service manager or the Identity Synchronizer Management Studio:

9. **Restart** the **Identity Synchronizer – Agent Service** if the machine to be upgraded is a domain controller:
